## **DETAILED ACTION**

### ***Information Disclosure Statement***

The information disclosure statement filed on January 13, 2006 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered. For some unknown reason two documents listed in this IDS are not in the file. See the considered IDS.

### ***Drawings***

Figures 6-9 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Merrill et al. (6,160,663). Merrill et al. (6,160,663) herein after referred to as "Merrill," teaches a backlight unit comprising: a backlight—light guide (108)—a first reflective polarizing sheet (114) and a second optical sheet (e.g. brightening film 112) that is optically different from the first sheet disposed adjacently to the first sheet in a separable manner in a direction normal to the plane thereof. Merrill further teaches that sheets 114, 112, 106, 110 may have anisotropic thermal expansion coefficients designed such that distortion due to thermal expansion of the sheets will be reduced.

Merrill does not expressly teach that the coefficient of linear expansion of the second optical sheet in the direction corresponding to the first direction is approximated to the coefficient of linear expansion of the first optical sheet in the first direction. However, this design choice, in addition to sheet placement and material selection, would have been obvious to one of ordinary skill in the art at the time of the invention because it would have been obvious to try to various combinations of sheets with anisotropic thermal expansion coefficients to reduce distortion (e.g., warping) from thermal effects as Merrill identifies as beneficial.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references listed on the attached PTO-892 teach related inventions.
